LinkedIn: <https://www.linkedin.com/in/abdurezak100/>
Address: Jimma, Oromia , Ethiopia

Professional Summary

Multidisciplinary AI Researcher and Odoo Developer with expertise in building intelligent systems and enterprise-grade ERP solutions. Proven record in AI/ML model development (computer vision, predictive analytics, NLP), and end-to-end Odoo ERP customization. Strong background in Python, TensorFlow, PostgreSQL, and modular ERP design. Experienced in academic research and practical software development for real-world business and healthcare needs.

Skills

Languages & Frameworks: Python, SQL, PyTorch, TensorFlow, XML, QWeb, JavaScript

AI/ML: CNN, CRNN, Transformers, Multimodal Learning, Data Labeling

Odoo: Custom Module Development, HR, Procurement, Sales, Inventory, QWeb Reports, API Integration

Tools: Git, Docker, PostgreSQL, PyCharm, VS Code

Cloud & Analytics: Google Colab, AWS, BigQuery, Power BI, Tableau

Work Experience

Odoo Developer – DSP Consultancy (Remote-Part Time) – Addis Ababa, Ethiopia - January 2025 - Present

- Developed and deployed a custom HR Management System on Odoo 18 tailored for hospital operations.
- Created a full **Accounting, Procurement, Stock Control, Sales & Purchase module** using Odoo framework.
- Customized QWeb templates for invoice, HR reports, and stock orders.
- Led Odoo deployment and user training sessions for non-technical staff.
- Developed an API Integration system of Odoo with Primecare EMR System

AI Engineer and Mentor - Debbal Technologies – Jimma, Ethiopia - October 2024 – January 2025

- Developed Prescription Paper Recognition Project using a deep learning model using CRNN and Transformer-based architectures, achieving 85% accuracy on local handwritten prescription recognition.
- Processed and labeled a dataset of 1,000 prescription images, improving training efficiency by 20% through optimized preprocessing techniques.

AI Researcher - Jimma University – Jimma, Ethiopia- October 2021 – October 2024

- Created an AI-based crop health monitoring model, increasing diagnosis accuracy by 20% through multimodal data analysis.
- Deployed scalable algorithms on TensorFlow, integrating environmental and visual data for tailored agricultural solutions.
- Led research on Cervical Cancer Prediction Using Colposcopy Images and Clinical Data, developing a

multimodal deep learning model combining image-based CNNs with structured clinical features (e.g., age, sexual history, HPV, pregnancies).

- Designed and compared three fusion strategies: early fusion, late fusion, and shared intermediate architecture, achieving strong performance on a three-class classification task (Positive, Normal, Non-Cervical).

Projects

- **Cervical Cancer Prediction Using Colposcopy Images and Clinical Data**
Developed a multimodal deep learning model to predict cervical cancer by integrating image-based CNNs and clinical data (age, sexual history, HPV, etc.). Conducted experiments with early fusion, late fusion, and shared intermediate architectures. Achieved strong performance on multi-class classification with Positive, Normal, and Non-Cervical labels.
- **HRM + Procurement System for Hospitals (Odoo 18)**
Designed and deployed a fully customized Human Resource Management and Procurement system using Odoo 18 for healthcare facilities, handling payroll, attendance, inventory, and purchase workflows.
- **Prescription Recognition using Deep Learning (CRNN + Transformer)**
Built an end-to-end OCR model for recognizing handwritten prescriptions, achieving 85% accuracy. Enhanced training through optimized preprocessing and labeled 1000+ images.
- **Multimodal Crop Disease Prediction System (AI Research)**
Created a TensorFlow-based model to monitor crop health by combining environmental and visual data, increasing diagnostic accuracy by 20%.
- **Enawera – RAG-Based AI Chatbot Platform**
Developed a Retrieval-Augmented Generation chatbot system for domain-specific question answering, integrating vector search and generative AI models.
- **Sales Forecasting –Pharmaceuticals (Odoo 18 Integrated)**
Built forecasting models to optimize inventory and sales prediction using time series and machine learning techniques.
- **Telegram E-Commerce Analytics Dashboard**
Built a dashboard to analyze user behavior and campaign ROI from Telegram-based sales for an e-commerce platform.
- **Financial News & Stock Prediction Analysis**
Applied NLP and sentiment analysis techniques to financial news data to predict stock movements.

Education

MSc in Artificial Intelligence – Jimma University - Jimma, Ethiopia – October 2021 – October 2024

- **CGPA:** 3.68 and Research: Very Good

BSc in Computer Science– Jimma University - Jimma, Ethiopia – October 2017 – December 2020

- **CGPA:** 3.79

Certification

- 10Academy- Kifiya AI Mystery Program Certified with AI and Data science
- Udacity- Data Science course Certified
- Udacity- Artificial Intelligence Course Certified
- Spark Academy – AI and Medical Imaging Course (on Going)
